**Andela is introducing a new way to  
process and sort commingled  
recyclable packaging**

**10 Tonnes per hour throughput!**

**Fully automated!**

**No Hand Picking!**

**Creative solutions are needed to  
reduce MRF operating costs.**

**Reduce those costs with “COSS”!**

The commingled collection of containers (glass, plastic and cans) utilising compaction vehicles is a proven way of increasing efficiency and profitability of kerbside collection operations, but this mix of materials needs to be separated into marketable commodities. The Andela COSS will provide clean separated commodities from commingled recyclables with no manual separation. The standard system delivers five materials; pulverised glass, ferrous metal, aluminium, HDPE and PET plastics with a throughput rate of 10 tonnes per hour. There is no manual input to the sorting of the materials.

## COMMINGLED
